Artificial Intelligence

Artificial Intelligence (AI) is a field of computer science that focuses on creating systems capable of performing tasks that normally require human intelligence.

Machine Learning

Machine learning is a subset of artificial intelligence that enables systems to learn patterns from data and make predictions or decisions without being explicitly programmed for every task.

Retrieval Augmented Generation

RAG combines information retrieval with large language models. Documents are converted into chunks, transformed into embeddings, stored in a vector database, and retrieved when a user asks a query.
